

MOHAMED WAGEH

Machine Learning Engineer & Data Scientist

Mansoura, Egypt | +20 101 554 7839 | engwagehii@gmail.com | linkedin.com/in/wagehii | github.com/wagehii | Portfolio: bit.ly/wagehii

PROFESSIONAL SUMMARY

Results-driven ML Engineer with hands-on production experience in Python, C++, Computer Vision (YOLO), and end-to-end MLOps deployment. Proven track record delivering 5+ AI projects on-time and leading a 32-person data science cohort through agile milestones. Bridges academic ML rigor with real-world impact — from raw data ingestion to live predictive applications.

TECHNICAL SKILLS

Languages: Python, C++, SQL, C#

Machine Learning & AI: Deep Learning, Computer Vision, YOLO, XGBoost, Scikit-learn

Data Science & Tools: Pandas, NumPy, Matplotlib, Feature Engineering, Git, Streamlit, MLOps Fundamentals

PROFESSIONAL EXPERIENCE

Freelance ML Engineer & Python Developer | [Khamsat · Mustaqil · Kafil](#)

Jan 2025 – Present

- Maintained a 100% on-time delivery rate and 5-star client satisfaction across 5+ ML micro-projects by enforcing strict sprint planning and automated testing on every deliverable.
- Reduced client data-processing time by 30% by engineering reusable Python pipeline modules with Pandas and NumPy, eliminating redundant preprocessing steps across multiple engagements.

Data Science Team Leader | [Digital Egypt Pioneers Initiative \(DEPI\)](#)

Nov 2025 – Jul 2026

- Achieved 100% milestone completion ahead of schedule for a 32-person data science cohort by implementing Agile sprint frameworks, weekly syncs, and a shared MLOps best-practice playbook.
- Elevated team code quality and model reproducibility by mentoring peers in ML algorithms and advanced Python, standardizing evaluation workflows across all cohort projects.

Data Science Committee Member | [CAT Reloaded](#)

Aug 2024 – Present

- Delivered end-to-end ML models for 2 competitive hackathons — covering feature engineering, model selection, and evaluation — achieving top-tier performance within each competition's time constraints.
- Increased AI community engagement to 650+ students by co-organizing 3 major technical events and presenting actionable insights on emerging ML and Computer Vision trends.

KEY PROJECTS

Enterprise Healthcare Risk Prediction Platform | [Lead ML Developer](#) | [DEPI Capstone](#)

- Improved predictive model AUC by 12% over baseline by architecting an end-to-end XGBoost pipeline with structured Feature Store engineering across 10,000+ patient records.
- Accelerated clinical decision-making by deploying the final model artifact via an interactive Streamlit dashboard, enabling real-time risk stratification without engineering intervention.

Smart Vision System | [Real-Time Computer Vision](#) | [Deep Learning](#)

- Achieved high-speed, accurate multi-class object detection in real-time by developing and integrating a YOLO-based inference system optimized for standard consumer hardware.
- Minimized inference latency for production deployment by tuning confidence thresholds and NMS parameters, reducing pipeline overhead without sacrificing detection accuracy.

Disease Prediction Full-Stack Web Application | [End-to-End ML Deployment](#)

- Sustained zero performance degradation under 100+ concurrent real-time requests by engineering a scalable ML web application with optimized model serving and session management.
- Reduced user input time by 40% by transforming 5,000+ raw medical records into structured training data and designing an intuitive Streamlit UI that abstracts model complexity entirely.

EDUCATION

Bachelor of Science in Computer Science | [Mansoura University, Egypt](#)

Expected Graduation: 2027

- Relevant coursework: Machine Learning, Deep Learning, Algorithms & Data Structures, Digital Signal Processing, Computer Vision, Database Systems, Software Engineering.
